Ahmedabad, Gujarat

EDUCATION

Lok Jagruti University

Bachelor of Engineering in Information Technology; CGPA: 9.4/10

Ahmedabad, Gujarat

Sep. 2023 – Aug. 2027

TECHNICAL SKILLS

Languages: Python, JavaScript, Java, SQL, HTML/CSS

AI/ML: LLM Fine-Tuning, QLoRA, LoRA, RAG (Retrieval-Augmented Generation), Anomaly Detection, Predictive Modeling, scikit-learn, pandas, NumPy, Vertex AI, Vector Databases

Frameworks & APIs: React.js, Django, FastAPI, Bootstrap, GCP Speech-to-Text, GCP Vision API, Vertex AI Search, Stripe API, Leaflet.js, WebSockets

Cloud & DevOps: Google Cloud Platform, Oracle Cloud Infrastructure, Cloud Storage, Git, REST APIs, Docker

Domains: AI Engineering, NLP, MLOps, Full-Stack Development, System Design

EXPERIENCE

AI Engineer Intern

eInfochips – An Arrow Company

Apr. 2026 – Present

Ahmedabad, Gujarat

- Executing **parameter-efficient LLM fine-tuning** using **QLoRA and LoRA** with FP16/BF16 mixed-precision training to adapt large language models on domain-specific datasets
- Implementing **transformer architecture internals** – attention mechanisms, tokenization pipelines, and model evaluation metrics – within a production-grade semiconductor AI environment

Software Developer Intern

Navneet Education Limited

Oct. 2025 – Mar. 2026

Ahmedabad, Gujarat

- Engineered a **Speech-to-Text voice logging system** on GCP, converting spoken product codes and quantities into structured inventory records – eliminating manual data entry for warehouse teams
- Built an **automated invoice OCR pipeline** using GCP Vision API, extracting and structuring billing data from physical documents for finance operations
- Developed an **internal RAG chatbot** using Vertex AI Search and Discovery Engine API, enabling natural language querying over proprietary product catalogs and internal documentation

PROJECTS

SensorGuard | *React, Django, Python, scikit-learn, pandas, NumPy* | [Live](#) | [GitHub](#)

- Architected an **ML-powered IoT anomaly detection system**, applying Isolation Forest and Z-score drift analysis on real-time industrial sensor streams to predict calibration failures before occurrence
- Trained **predictive maintenance models** using scikit-learn, identifying sensor drift and voltage spikes – reducing simulated manual inspection overhead by ~40%
- Delivered **real-time React dashboards** with automated alert reporting; recognized as **1st Runner-Up at Hackovate LJ 2025** among 800+ participants across 250+ teams

LetsPark | *React.js, Django, Stripe, Leaflet.js, WebSockets, Geocode API* | [Live](#) | [GitHub](#)

- Built a **full-stack real-time parking platform** with WebSocket-driven slot availability, Stripe payments, and geolocation-based discovery via Leaflet.js and Geocode APIs
- Designed **role-based provider dashboards** for listing management, occupancy tracking, and revenue analytics – backed by optimized Django REST APIs and a normalized database schema
- Pitched at a **Shark Tank-style venture competition** – researched India's urban parking market, modeled break-even occupancy at 28–32%, and presented a 8L funding ask at 40L pre-money valuation

ACHIEVEMENTS

- 1st Runner-Up – Hackovate LJ 2025:** Ranked 2nd among 800+ participants across 250+ teams; built and deployed SensorGuard, an ML-based industrial sensor anomaly detection platform, within the hackathon timeline

CERTIFICATIONS

- Oracle Cloud Infrastructure AI Foundations Associate** – Oracle (Sep. 2025)
